PROFESSIONAL SUMMARY

Motivated Software Developer and fresher with a strong foundation in programming, web development, and software engineering principles. Experienced in building and deploying applications, with hands-on exposure to automation, scripting, and cloud infrastructure. Quick learner with a passion for writing clean, efficient code and delivering reliable software solutions. Additionally skilled in DevOps practices including CI/CD pipelines, AWS, and infrastructure monitoring.

TECHNICAL SKILLS

Programming	Java, Python, Bash Scripting
Web Development	HTML, CSS, JavaScript
Cloud & DevOps	AWS (EC2, S3, IAM, VPC, CloudWatch), Jenkins, Maven, Terraform
Monitoring	Prometheus, Grafana
Version Control	Git, GitHub
CI/CD	Jenkins Pipelines, Maven Build Automation

WORK EXPERIENCE

Product Engineer – Testing Team

2025 (6 months)

Tata Electronics Pvt. Ltd. — Mahindra City, Chennai

- Performed functional, reliability, and performance testing of semiconductor and electronic products ensuring compliance with quality standards.
- Automated repetitive testing workflows using Bash scripting, reducing manual effort by ~40% and improving overall team efficiency.
- Developed and executed detailed test plans, test cases, and validation procedures for electronic components.
- Analyzed large datasets and generated actionable reports contributing to defect reduction and yield improvement.
- Continuously monitored product performance and contributed to process optimization and reliability improvements.

EDUCATION

Bachelor of Engineering — Electronics & Communication Engineering

2021 – 2025

Kongunadu College of Engineering and Technology, Trichy

CGPA: 7.90 / 10

DEVOPS PROJECTS

CI/CD Pipeline Automation | *Personal Project*

Built an end-to-end CI/CD pipeline using Jenkins, Maven, and GitHub to automate build, test, and deployment of a Java web application on AWS EC2.

Stack: Jenkins, Maven, GitHub, AWS EC2, Bash

Infrastructure Provisioning with Terraform | *Personal Project*

Provisioned AWS infrastructure (VPC, EC2, S3, IAM roles) using Terraform IaC scripts, achieving repeatable version-controlled cloud environments.

Stack: Terraform, AWS, Git

System Monitoring Dashboard | *Personal Project*

Set up Prometheus and Grafana on Linux to monitor server metrics (CPU, memory, disk) with alert rules and real-time visual dashboards.

Stack: Prometheus, Grafana, Linux, Bash

ACADEMIC PROJECTS

Automatic Blind Time Wreck Control System | *Academic Project*

Designed a road safety system for low-visibility conditions using sensors to detect nearby vehicles and automatically reduce engine RPM to maintain safe distance and prevent collisions.

Stack: Embedded C, Sensors, Microcontroller, Motor Control

Automatic Blind Time Wreck Control System Using Odium | *Academic Project*

Enhanced version introducing a magnetic repulsion mechanism to automatically maintain safe distance between vehicles in fog or low-visibility conditions.

Stack: Embedded C, Magnetic Repulsion, Sensors, Microcontroller

Cerebrovascular Accident Detector Using FPGA | *Final Year Project*

FPGA-based real-time stroke detection system integrating EEG signal processing and machine learning techniques for early cerebrovascular accident prediction.

Stack: FPGA, VHDL, DSP, Machine Learning

Efficient VLSI Based Image Enhancement Using VHDL | *Academic Project*

Proposed an image enhancement system using Verilog HDL simulated in Modelsim 6.4c and synthesized using Xilinx, achieving ~85% enhancement efficiency in low-light conditions.

Stack: Verilog HDL, VLSI, Modelsim, Xilinx

Snazzy Glider Using Beckon | *Academic Project*

Gesture-controlled wheeled glider using flex sensors and DC motors, with an LCD for real-time feedback on movement direction.

Stack: Embedded C, Flex Sensor, DC Motors, LCD

ACHIEVEMENTS

- 1st Place — Project Presentation: "Automatic Blind Time Wreck Control System" at National Level Technical Symposium, Velagapudi Ramakrishna Siddhartha Engineering College
- 3rd Place — Project Presentation: "Snazzy Glider Using Beckon" at Kongunadu College of Engineering and Technology
